MOTIVATION

- **Real-Life Observations**: In many rural and semi-urban areas, people often struggle to understand official documents or apply for government schemes due to complicated language and unclear instructions.

- **Common Experience:** Individuals frequently end up paying extra or seeking third-party help just to complete basic documentation correctly and avoid multiple trips to government offices.

- **Widespread Struggles:** Senior citizens and those with limited digital skills often face even greater challenges, navigating the process alone with little to no guidance.

- **Systemic Gap:** While digital access to documents has improved, the clarity and understanding of those documents remain a major gap.

- **A Practical Solution:** A smart, multilingual digital guide can bridge this gap by simplifying documents, explaining government schemes, and offering step-by-step guidance—especially for users with limited digital or literacy skills.

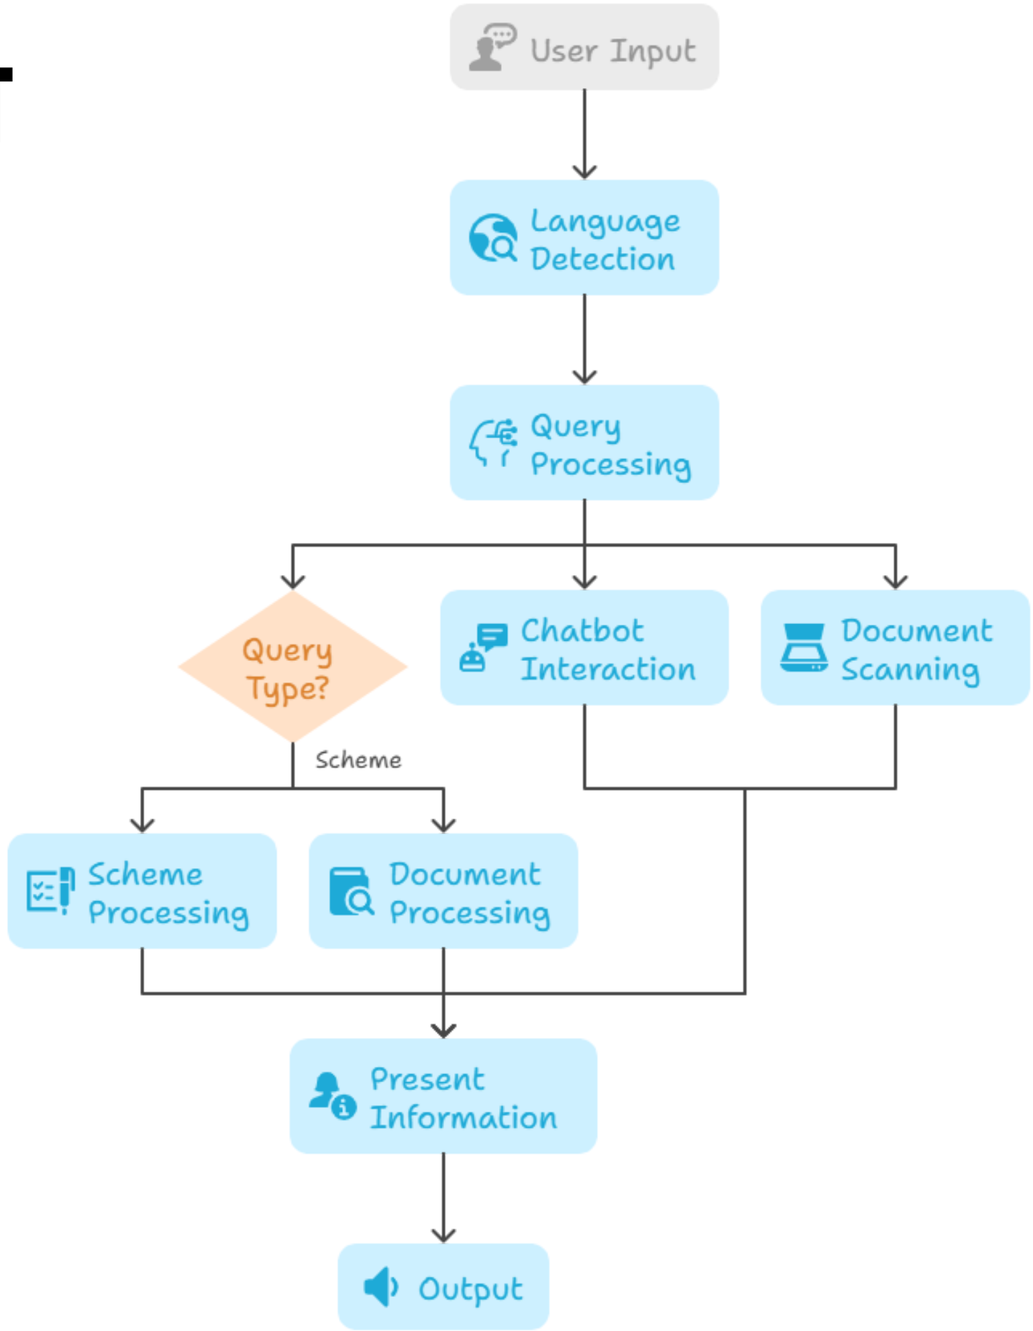
INNOVATIVE APPROACH

Feature / Aspect	Digital Gujarat	MyScheme (Govt of India)	Our Project (Proposed)
Main Purpose	Apply for certificates/documents	Discover government schemes	Simplify documents and explain schemes step-by-step
Language & Accessibility	English/Gujarati (basic UI only)	English/Hindi only	Multilingual with voice/audio support (including Gujarati)
Document Understanding	Not available	Not available	Explains forms and certificates in simple, understandable terms
Personalized Guidance	General process only	Scheme filters by category	Interactive, step-by-step guidance based on user needs
Support for Rural/Elderly Users	Minimal	Minimal	Built specifically for low-literacy and non-digital users

ETHICAL IMPLICATION

- Your privacy and safety are fully protected.
- All guides are written in simple, easy-to-understand language.
- Made for everyone—no matter your age, education, or digital skills.
- You can do everything yourself—no need to depend on agents or third parties.
- Available in English, Hindi, and Gujarati.

FLOW CHART



User Input
Language Detection
Query Processing
Query Type?
Chatbot Interaction
Document Scanning
Scheme
Scheme Processing
Document Processing
Present Information
Output

MODULE 1 - LEGAL DOCUMENTS AND SCHEMES

Objective:

Legal Documents	Government Schemes

• Handle typed or spoken user queries.
• Detect keywords like document type and purpose.
• Fetch data from a structured document database.
• Present info on:
  ○ Eligibility
  ○ Required documents
  ○ Issuing authority
  ○ Validity
  ○ Application process (online/offline)
	• Understand user queries on schemes.
	• Extract attributes like age, gender, income, occupation.
	• Match user profile or keywords to relevant schemes via rule-based or ML models.
	• Provide details:
	  ○ Eligibility
	  ○ Benefits
	  ○ Required documents
	  ○ How to apply

MODULE 2 - SCAN DOCUMENTS

Objective

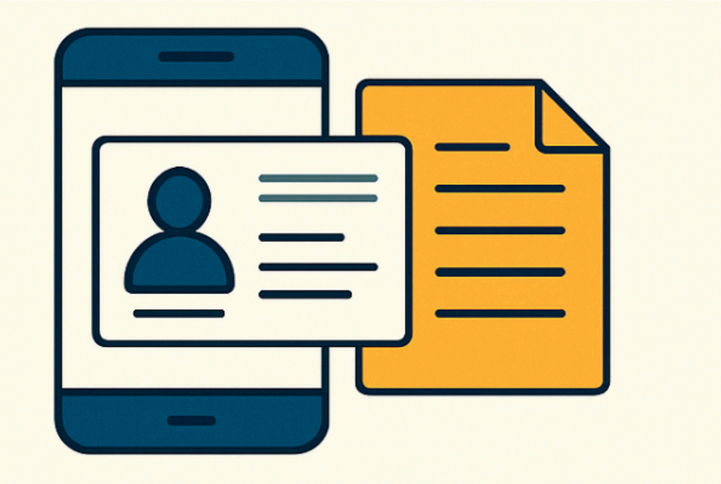
- Accept image/PDF uploads of documents.
- Use OCR to extract key data (name, ID number, dates, etc.).
- Automatically detect document type (e.g., Aadhaar, PAN).
- Link scanned documents with application tracker if available.
- Provide step-wise suggestions or next actions (e.g., renewal, submission).

Inputs:

Scanned document (image or PDF)

Outputs:

- Extracted document details
- Detected document type
- Status or actions required



MODULE 3 - CHATBOT

Objective:

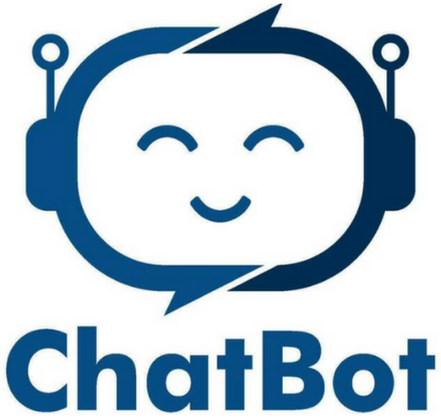
1. Accept natural language queries from users.
2. Identify the keywords and entities (e.g., document type, scheme name).
3. Match queries with our data. (through the dataset)
4. Generate user-friendly responses in step-wise format.
5. Handle follow-up queries, rephrased questions, or clarification requests.

Inputs:

User query for the document or the schemes he/she wants to search.
(e.g. Aadhar card, PAN card and more.)

Outputs:

Step-by-step instructions or concise summaries. and
Clarification prompts if the question is ambiguous.



MODULE 4- MULTILINGUAL

Objective:

- Detect or allow selection of preferred user language.
- Translate user input to the base language English for processing
- Translate chatbot response back to user's preferred language.
- Handle context-specific translations (e.g., legal terms simplified accurately).

Inputs:

User message or query in any supported language. and
Response generated by chatbot in English.

Outputs:

All chatbot replies and UI content displayed in the selected language.

MODULE 5 - NEXTSTEP GUIDE

Objective:

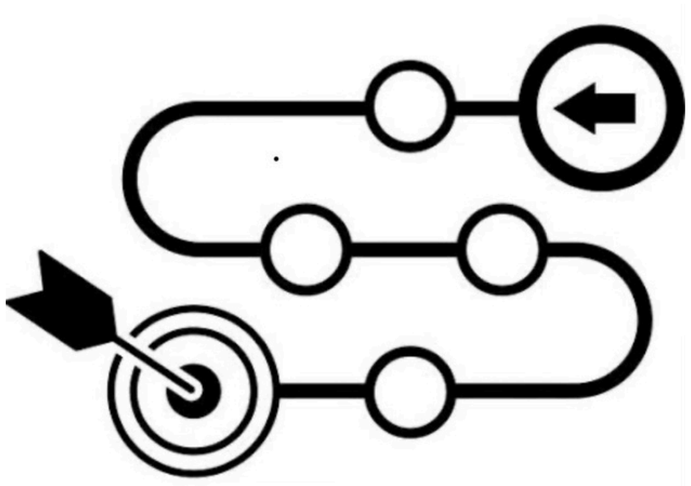
- Accept process-related queries (e.g., "How to get a caste certificate?").
- Break down complex procedures into simple, actionable steps.
- Adapt the pathway based on user profile, location, and available documents.
- Offer timelines, required visits, fees, and department info.
- Update progress based on completed steps or uploaded proofs.

Inputs:

Selected process or scheme

Outputs:

- Personalized, step-wise roadmap
- Status indicators (e.g., "Step 2 of 5 completed")



Layer

TECHNOLOGY USED

Layer	Technology used
Fronted	HTML + React.js + Next.js + CSS
Backend	MongoDB / Supabase
Scheme(OCR)	Gemini API
Translation	Google TTS
TTS	Google TTS / Bhashini

THANK YOU
